SUMMARY

Full Stack Developer with hands-on experience building enterprise-grade AI platforms and LLM-integrated applications. Skilled in **prompt engineering**, RAG pipelines, and integrating models including **Llama, Claude, and OpenAI** across production environments. Proficient in **Python, React, Node.js, Next.js, and Docker**. Seeking a **Full-Stack AI Developer Intern** role to build LLM-powered features that enhance employee productivity and business outcomes.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Python, Java (DSA)
Frontend: React.js, Next.js, Tailwind CSS, Recharts, Chart.js
Backend: Node.js, Express.js, REST API Design, Cron Jobs, Mongoose
Databases: MongoDB, MongoDB Atlas, MySQL
AI / LLM: Groq SDK, Llama 3.3, Claude API, OpenAI API, RAG Pipelines, Prompt Engineering, Sentiment Analysis, TensorFlow, PyTorch (foundational)
DevOps / Cloud: Docker, Git, GitHub, Vercel, Render, Postman, AWS, GCP

PROJECTS

- PrepWise AI** | *React, Next.js, Node.js, Express, Groq SDK, Python, pdf-parse* [GitHub](#)
- Built an AI interview simulator that parses resumes and generates personalized, role-based technical questions via a full LLM pipeline (RAG → Prompt Engineering → Evaluation), demonstrating end-to-end enterprise AI workflow design
 - Engineered structured prompt templates with few-shot examples to improve output consistency; iteratively refined the scoring pipeline through manual test runs until responses reliably matched rubric criteria
 - Designed a radar-chart performance dashboard assessing Technical Knowledge and Communication with structured improvement feedback; implemented secure resume upload with optimized Groq API inference
- AI Journal System** | *React, Node.js, Express, MongoDB, Llama 3.1, REST APIs, Docker* [GitHub](#)
- Deployed a production AI journaling platform with LLM-powered sentiment analysis and automated summaries — live with **100+ active users**; containerized using Docker for consistent environment management
 - Engineered prompt engineering strategies for summarization and sentiment tasks; secured backend pipelines with server-side API key protection, reducing LLM API latency by **25%** through inference optimization
 - Iterated on prompt design based on user feedback to continuously improve output relevance; benchmarked model responses against quality criteria across multiple prompt versions
- Gharpayy CRM** | *React (Vite), Node.js, Express, MongoDB Atlas, Chart.js* [GitHub](#)
- Developed a full-stack enterprise CRM with lead lifecycle tracking, pipeline conversion analytics, and automated follow-up workflows — analogous to AI-integrated business process systems
 - Optimized MongoDB Atlas queries to improve dashboard load performance; implemented cron-based workflow automation to reduce manual effort and augment team productivity

EDUCATION

Puducherry Technological University	Puducherry, India
<i>B.Tech in Electronics and Communication Engineering</i>	2023–2027
<i>Relevant Coursework: Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks</i>	

CERTIFICATIONS

AWS Cloud Practitioner — *Amazon Web Services*
Google Cloud Associate Cloud Engineer — *Google Cloud Platform*

ADDITIONAL

- Shipped 3 production AI applications solo including an LLM-powered interview simulator with RAG pipeline and prompt engineering strategies serving real users
- Familiar with popular LLMs including **Claude (Anthropic), ChatGPT (OpenAI), and Llama** — applied across sentiment analysis, summarization, and evaluation use cases
- Actively practicing DSA in Java — proficient in Dynamic Programming and Graph problems; comfortable in fast-paced, high-ownership engineering environments
- Comfortable collaborating across cross-functional teams, communicating AI concepts to both technical and non-technical audiences
